

# Alpha-Globin Common Mutation Analysis

Test ID: 11175

CPT: 81257

## Clinical Significance:

Alpha Thalassemia is a common hereditary trait and disease among individuals of Asian heritage. Disease ranges in severity from mild abnormalities of erythrocytic indices to severe anemia. Genetic counseling may be advised for some patients.

## Profile Components:

# Labtech Diagnostics

### Container:

EDTA (lavender-top) tube

### Transport Temperature:

Room temperature

### Specimen:

Whole blood

### Specimen Stability:

Room temperature: 7 days  
Refrigerated: 7 days  
Frozen: Unacceptable

### Reject Criteria:

Received frozen

### Days Performed:

Mon

## Collection Instructions:

### Physician Attestation of Informed Consent

This germline genetic test requires physician attestation that patient consent has been received if ordering medical facility is located in AK, DE, FL, GA, IA, MA, MN, NV, NJ, NY, OR, SD or VT or test is performed in MA.
