Clinical Significance:

A mould, which may result in allergy symptoms in sensitised individuals
Aureobasidium pullulans is a ubiquitous yeast-like fungus that can be found in different environments (e.g. soil, water, air and limestone). (3) It may occur as a naturally occurring epiphyte or endophyte of a wide range of plant species (e.g. apple, grape, cucumber, green beans, cabbage) without causing any symptoms of disease. It is most common in temperate zones, with numerous recordings from the British Isles and the USA, but is also found in Canada, Alaska, Antarctica, Europe and Russia.
